Rupiero

— budgeting in two currencies

A ledger-style money app for a life split between euros and rupiah.

EUR IDR · Android · offline-first

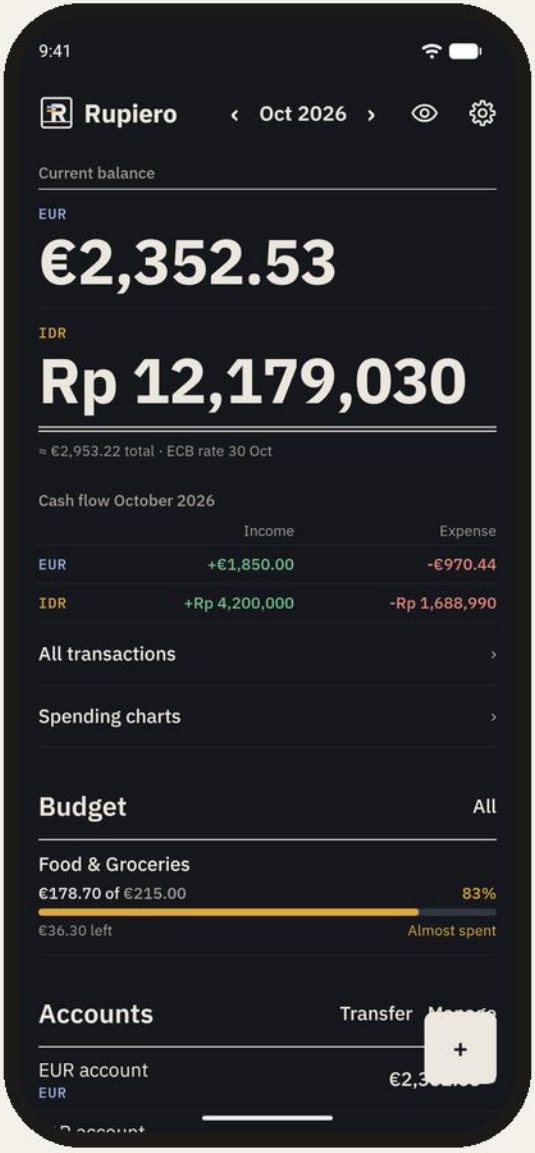

Two currencies, never mixed

Euro and rupiah balances side by side, plus an approximate total at the ECB reference rate.

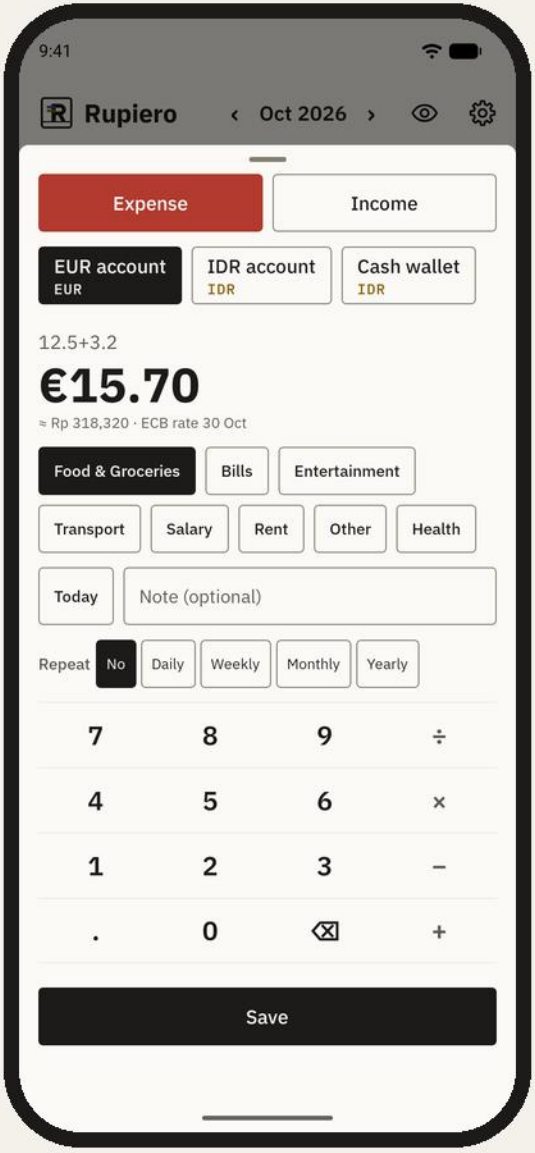

Light or dark, your choice

Follows the phone, or pick light or dark in Settings. The date picker and widget follow too.

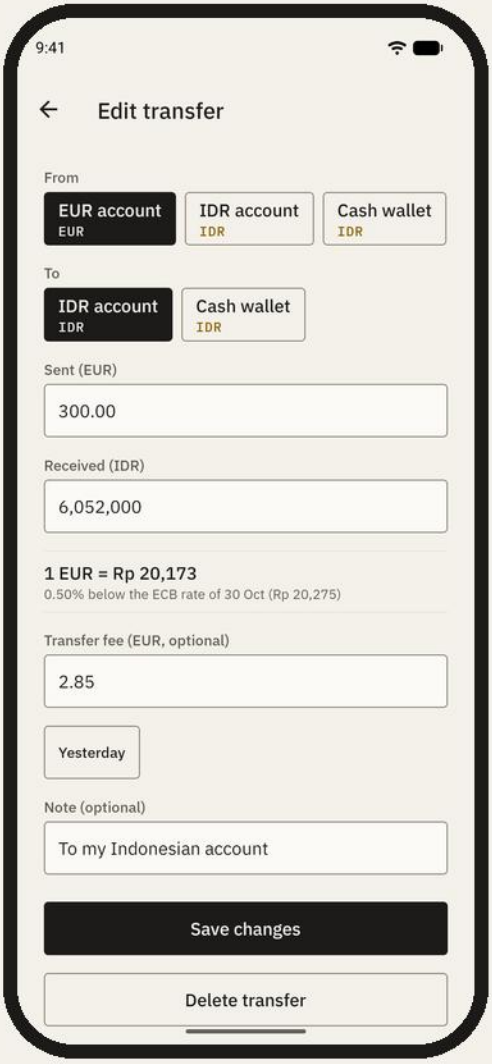

Log an expense in 5 seconds

A keypad with a built-in calculator: 12.5 + 3.2 is €15.70, previewed in rupiah as you type.

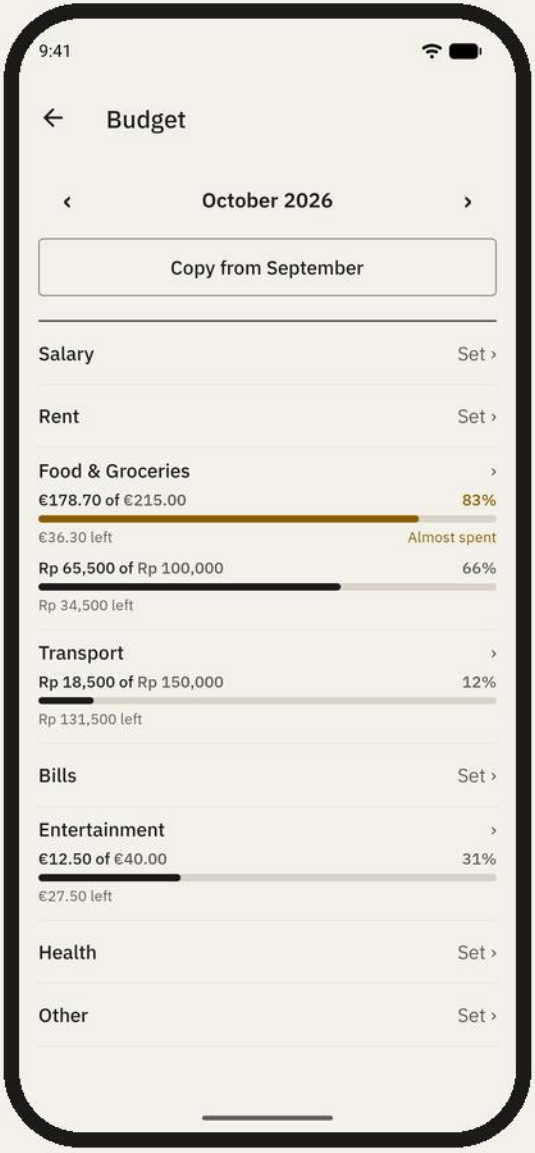

See what each conversion really costs

The rate you actually got, how far it is from the ECB rate that day, and the fee you paid.

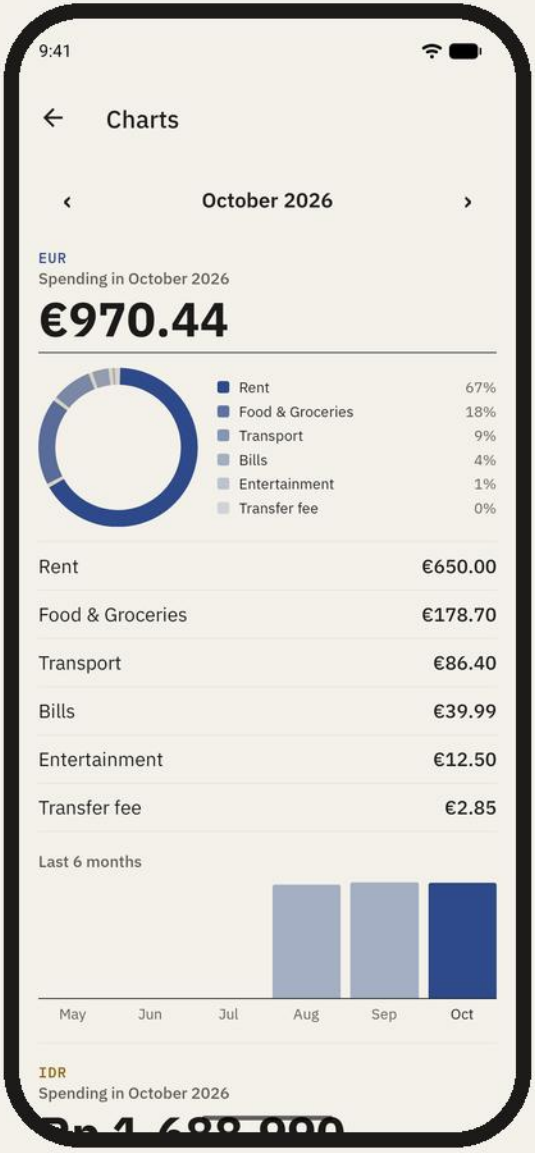

Budgets per currency

Per category and month, in euro and rupiah separately. A warning from 80%, red once over.

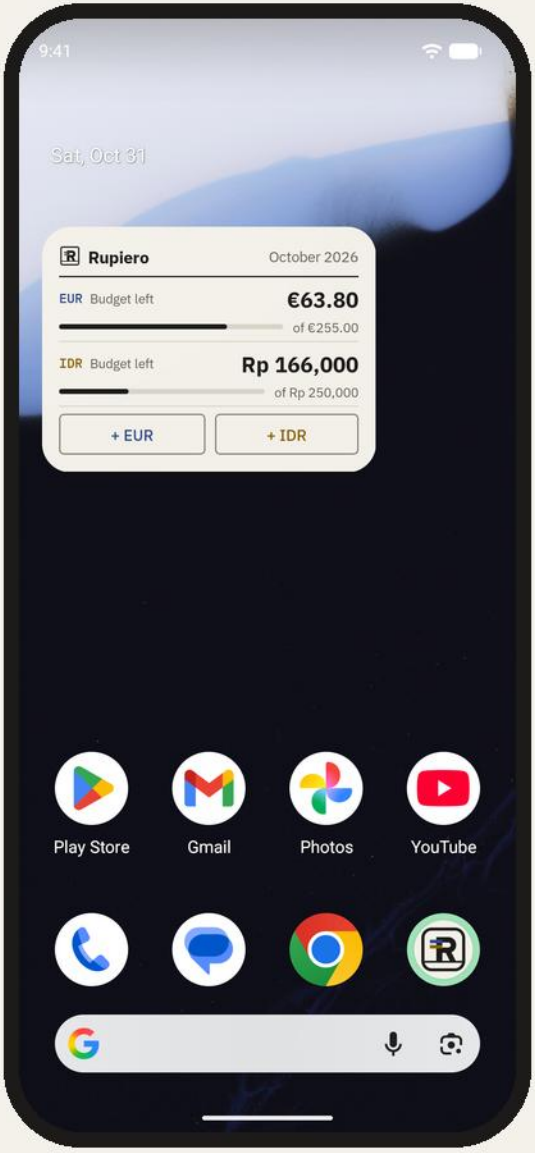

See where the money goes

Spending by category and a six-month trend, drawn in the same ledger style.

From your home screen

What is left of this month’s budget per currency, and one-tap quick add for EUR and IDR.

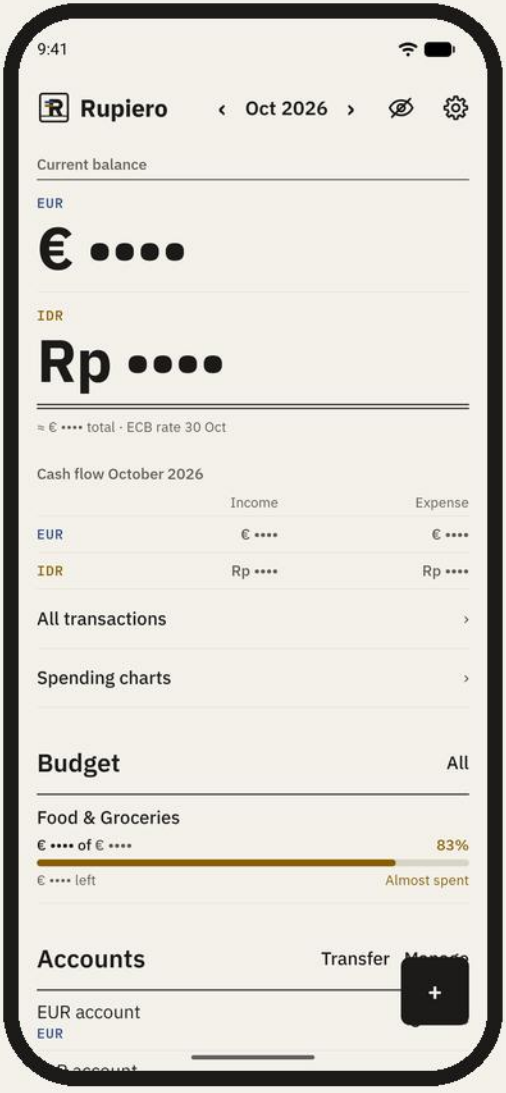

Privacy in one tap

The eye icon hides every amount, in the app and optionally in the widget.

Before

After

How it is built

No server and no account: every number stays on the phone.

React Native

Expo SDK 54, new architecture

TypeScript

strict, end to end

SQLite

offline-first, versioned migrations

320+ tests

money in integer minor units, BigInt FX
